Synopsis

â ‹This book is an up-to-date reference on all aspects of anticoagulation and hemostasis in neurosurgery.Â After an opening section on basic principles and drug classes in current use, detailed consideration is given to coagulation issues relevant to all patients, not just neurosurgical ones. The coverage includes, for example, deep vein thrombosis, pulmonary embolism, and disseminated intravascular coagulation. A variety of important issues specific to neurosurgical practice are then addressed, and a summary of current guidelines and best practices is provided. By bringing together the latest knowledge from across the discipline, this book will serve as a sound basis for informed decision making in surgical practice. It will be of daily value for neurosurgeons and trainees worldwide and will also be of interest to emergency room physicians, surgeons in general, critical care physicians, neurologists, and hospital medicine specialists.
